

# American International University - Bangladesh (AIUB) INTRODUCTION TO DATA SCIENCE [E]

Name: Shanto Kumar Basak

ID: 20-42945-1

**Faculty Name: Tohedul Islam** 

Date of Submission: 30<sup>th</sup> April 2023

# **Final Term Project (Applying K-means)**

<u>Introduction:</u> The straightforward and widely used unsupervised machine learning approach K-means clustering. Unsupervised algorithms often draw conclusions from datasets using just the input vectors and no knowledge of the known, or labeled, results. Household Living Cost dataset collected from <a href="https://www.stats.govt.nz/large-datasets/csv-files-for-download/">https://www.stats.govt.nz/large-datasets/csv-files-for-download/</a> this site.

# 1) Observing the Dataset

```
mydata <- read.csv("D:/Shanto IDS Project/Household-living - costs.csv",header=TRUE,sep=",")
```

#### mydata

```
> mydata <- read.csv("D:/Shanto IDS Project/Household-living-costs.csv",header=TRUE,sep=
> mydata

# **Elbow Method:**

fviz\_nbclust(mydata1, kmeans, method = "wss", diss=NULL) +
labs(subtitle = "Elbow method")

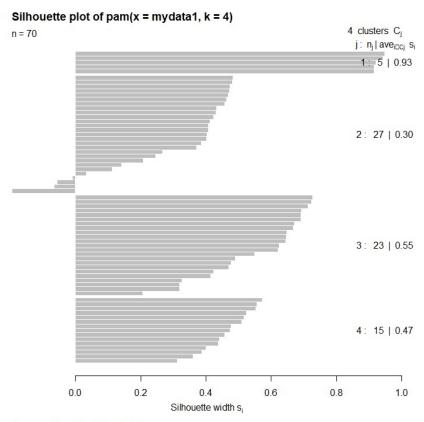

# Optimal number of clusters

# 5) Cluster and Silhouette Plot

plot(kR)

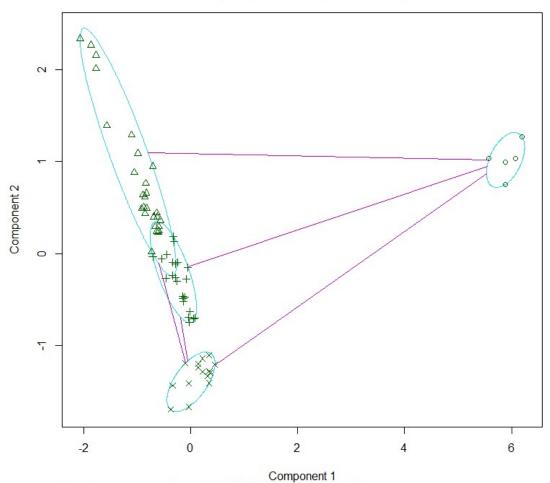

# **Silhouette Plot:**

Average silhouette width: 0.46

## **Cluster Plot:**

# clusplot(pam(x = mydata1, k = 4))

These two components explain 98.18 % of the point variability.

<u>Conclusion:</u> K-means clustering is an unsupervised machine learning method that is a component of a vast array of data approaches and operations in the field of data science. Data points are categorized using kmeans into unique, non-overlapping groupings. It is very easy to put into practice. Cluster generalization for various sizes and forms.
